# ABDULLAH WAGIH IBRAHIM

**AI Engineer | Generative AI Engineer**

Cairo, Egypt | +20 100 214 3879 | abdullawagih1@gmail.com
Portfolio | linkedin.com/in/abdullah-wagih

## SUMMARY

AI Engineer with 3+ years of experience architecting and shipping enterprise-grade AI products across LLMs, Retrieval-Augmented Generation (RAG), autonomous agents, computer vision, and NLP. Led cross-functional teams of engineers delivering many production AI platforms across healthcare, logistics, education, and real estate for clients in Egypt and Saudi Arabia. Also an active AI instructor who has trained 500+ engineers and students in applied LLMs and deep learning bringing strong technical communication and mentorship to every engagement.

## TECHNICAL ARCHITECTURE HIGHLIGHTS

- Designed evidence-traceable RAG pipelines with deterministic chunking and multilingual embeddings for a clinical knowledge platform (NOOR), covering secure source intake through human-review workflows.
- Architected a hybrid operations platform (LogiBrain) converting unstructured WhatsApp messages into structured shipments, tasks, and approvals, with human-in-the-loop AI and role-based access control.
- Built model-routing, caching, and quota-controlled RAG infrastructure for an AI career platform (CareerOS), balancing cost-efficiency with response quality across multiple LLM providers.
- Own end-to-end AI system lifecycle: problem framing, data pipelines, model development, evaluation, deployment, and production monitoring.

## EXPERIENCE

### **AI Engineer** — Vitamera, KSA (Remote)

*Jun 2026 – Present* | *Part-time*

- Lead a multidisciplinary AI team of engineers delivering production-ready AI products for the Saudi market, translating business requirements into scalable technical roadmaps and sprint plans.
- Own solution architecture, task allocation, code reviews, technical standards, and delivery coordination across AI/LLM, backend, data, and product workstreams.
- Oversee development of LLM, RAG, AI-agent, computer-vision, and interview-analysis capabilities, with a focus on evaluation, testing, reliability, and deployment readiness.

### **AI Engineer** — Rubix, Cairo, Egypt

*Oct 2025 – Present* | *Full-time*

- Design and implement end-to-end AI systems that transform complex business requirements into scalable, production-ready solutions using LLMs, retrieval systems, and modern MLOps practices.
- Architect AI solutions across the full lifecycle problem framing, data pipelines, model development, evaluation, deployment, and monitoring partnering with cross-functional teams to keep systems reliable, scalable, and cost-efficient.

**Data Scientist** — Sahwah, KSA (Remote)

*Sep 2023 – Oct 2025* | *Part-time*

- Designed scalable ML solutions for real-time logistics, including shipment delay prediction and risk detection models, improving forecast accuracy by 15%.
- Built data processing pipelines using Spark and Hadoop, deploying predictive models for real-time operational use at 920 shipments/day scale.
- Created Power BI and Tableau dashboards for operational insight extraction and applied NLP to customer feedback and logistics notes to surface actionable trends.

## ADDITIONAL EXPERIENCE — AI INSTRUCTION

*Concurrently active as an AI Instructor (DEPI, AMIT Learning, Instant Software Solutions, 2023–Present), training 500+ engineers and students in NLP, LLMs, and deep learning. Full teaching portfolio available on request or in a dedicated Teaching CV.*

## SELECTED CLIENT PROJECTS

*Private client engagements — descriptions are intentionally limited to protect client confidentiality and intellectual property. Role: AI Solution Architect / Technical Product Builder.*

- Hormonify — AI-Powered Hormonal Health Platform: Architected a privacy-conscious platform combining structured symptom/cycle tracking, personalized AI insights, and scalable data and LLM workflows.
- LogiBrain — Logistics Intelligence OS: Architected a hybrid operations platform converting WhatsApp messages and files into structured shipments, tasks, incidents, approvals, and searchable records, including the Smart Inbox, command center, and human-in-the-loop AI workflows.
- CareerOS — AI-Powered Career Development Platform: Designed an AI career operating system for CV extraction, personalized career planning, and job-readiness support using RAG, vector search, model routing, caching, and quota controls.
- EduSys — Secure Education and Examination Platform: Architected a modular Arabic-first education platform covering identity, secure examinations, proctoring, learner tracking, and AI governance through service-oriented architecture.
- NOOR — Clinical Intelligence Platform: Architected an enterprise-grade platform transforming trusted medical guidelines into structured, AI-ready knowledge, including secure source intake, deterministic chunking, multilingual embeddings, and evidence-traceable RAG.
- AI-Powered Real Estate Platform: Architected an intelligent real estate platform supporting semantic property search, personalized recommendations, and conversational AI assistance for lead qualification.

## EDUCATION

**Bachelor's Degree in Computer Science** — Zagazig University

*Sep 2019 – Jul 2023* | *Specialization: Medical Informatics*

- Graduation Project: Architected and developed an end-to-end Brain Tumor Classification and Segmentation System using CNN-based models for medical image analysis — covering data processing, model development, evaluation, and deployment.

## CORE SKILLS

**AI & LLM Engineering:** LLMs, RAG, AI Agents, Prompt Engineering, LangChain, LlamaIndex, Embeddings, Semantic Search, Model Routing

**ML & Deep Learning:** Classification, Clustering, CNNs, RNNs, Transformers, Transfer Learning, Hyperparameter Tuning

**NLP & Computer Vision:** Named Entity Recognition, BERT, Sentiment Analysis, Object Detection (YOLO), Medical Image Analysis

**Engineering & Cloud:** Python, SQL, REST APIs, Git, Azure OpenAI, Azure Synapse Analytics, PostgreSQL, Vector Databases, n8n, MCP

**Analytics:** Power BI, Tableau, Matplotlib, Seaborn

## PUBLICATIONS

**Automated Blood Cancer Detection Models Based on Transfer Learning**

- Published in the Indonesian Journal of Electrical Engineering and Computer Science, 2024. Proposed a transfer-learning approach using pre-trained CNN models, achieving state-of-the-art accuracy of 97%.

## LANGUAGES

**Arabic:** Native

**English:** Fluent — Professional Working Proficiency, technical & client communication
